

1163 Automotive Sensor Simulation Tester

- To simulate the resistive sensor (e.g Coolant temperature) and to simulate the hall effect, photoelectric and electromagnet sensor.
- To activate ignition coils, idle motor control valves, compressor control valve, etc.
- DC voltage measurement.
- Circuit Open / Closed.
- General Power Testing Indication.
- Electronic Polarity Test
- Charging Performance Test.
- Circuit Weak Signal Test.
- Audio Signal Implementation.
