

Equalizer Z Cold Knife Blade

- Z Blades will remain flexible and retain their sharpness much longer than the average cold knife blade.
- The grinding of the blade is at a greater angle than other cold knife blades.
- This makes the resistance less when pulling the cold knife to cut the urethane and resists breaking, last longer and keep a sharp edge.
- Both the standard and the coined blades use the same proprietary hardening process.
- The Coined Z Blade... coined cold knife blade has the cutting surface of the blade made thinner, only about 35 thousandths of an inch thick.
- No need to grind this one and compromise the blade.
- A Standard cold knife blade is 62 thousandths thick: Z1, Z2, Z3, or Z7.
- Coined Z blades are already ground thinner: Z4, Z5, Z6 or Z8.
- Made in USA

Item No	Description
EQ-EZ3	Standard Blade 1-1/2"
EQ-EZ7	Standard Blade 1-1/4"
