

M0033 Ducati Clutch Basket Holding Tool

- This is a DUCATI clutch basket / drum holding tool.
- This tool is used to hold the clutch drum in place so you can remove the nut holding it on.
- Once the nut is removed, you can install a light weight basket or a slipper clutch.
- It is good to periodically make sure the nut is torqued to spec.
- This tool does not have a handle to wrestle with. It mounts to two of the holes for the clutch cover with the stainless steel hardware that is included.
- The mounting holes are slotted so that it is easier to install on the basket and drum.
- It fits all modern six speed DUCATI that have a twelve tab dry clutch
